

Lect #06

Diffusion Model (generic)

Stable Diffusion (particular model)
 ↓
 (Text-to-Image)

Prompt → سب سے زیادہ

negative prompt → سب سے کم
 ↳ exclude

// generate image
 iterative prompts

⇒ generate image from random noise

Picture --- noise --- noise --- ⇒ only noise
 ↓ remain noise --- remain noise
 Picture

- Noising the image forward picture
 ↳ (noise refers to unwanted information that disrupts clarity & accuracy)
- de-Noising the image backward process

image \rightarrow pixels \rightarrow each pixel $\underline{R, G, B}$ \rightarrow adding values in these 3 channels
 (1024×1024) Pixel

3 سے Pixel پر
 diffusion \rightarrow 2b' \rightarrow (Picture) \rightarrow \rightarrow computational resources
 \Rightarrow latency

latent representation \Rightarrow picture into vector form
 (channels) \rightarrow \rightarrow

Latent diffusion \Rightarrow perform diffusion on latent representation

\Rightarrow Prompt to Image
 \rightarrow prompt latent representation

when we add/remove noise
 \rightarrow unit time
 \rightarrow cosine representation

\Rightarrow Stable Diffusion

نویز کی ہٹا دینا یا بڑھانا
 Latent representation کی مدد سے
 اس طرح 2, 4, 8, 16, 32, 64, 128, 256, 512, 1024
 Guided noise removal

Prompt Example

• I highly skilled about needs manager
90% "Selling Skill"

• I 30% skill but a great manager

ابا پر شاکو و لو لیا کجائے
